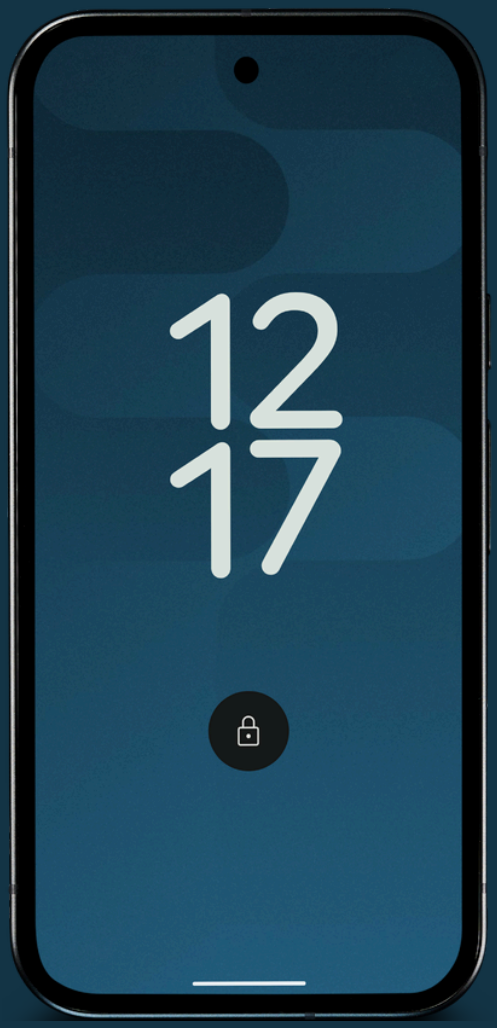
Designed to meet the requirements of accredited environments

The Färist Mobile T160 connects to an accreditable system* where traffic passes a VPN tunnel, ensuring secure use over unsecured networks.

The system is owned and managed by the organisation itself, with control over the devices via the proprietary MDM solution, Tutus Vakt. Through the MDM system, devices can be remotely wiped, configured, and managed with individual or group-based policies, tailored to the organisation's own needs and structures.

T160, built on the Google Pixel 10a, is designed as a corporate smartphone for office use, but also handles varying conditions, thanks to its IP68 rating, which protects against water and dust.



Designed for different environments

Färist Mobile is also available in a tactical configuration with a wide range of accessories tailored for operational environments and field use.

Would you like to know more about Färist Mobile?

Contact us for a walkthrough of how the solution meets your organisation's security requirements. Tutus offers support on all our products, solutions and services.

**Färist Mobile is a valued and approved solution in several European countries for handling classified information. The smartphone is also available in a configuration approved for the Swedish security classification level restricted secret (BH). Google, Pixel and Android are trademarks of Google LLC.*
