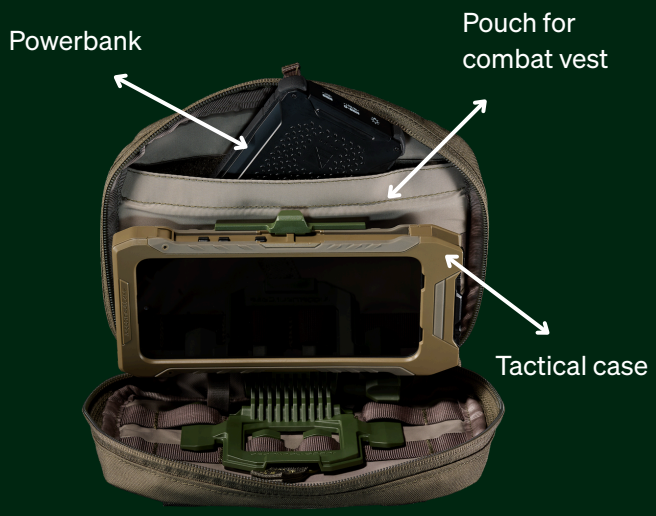
Designed to meet the requirements of accredited environments

The Färist Mobile T220 connects to an accreditable system* where traffic passes a VPN tunnel, ensuring secure use over unsecured networks.

The system is owned and managed by the organisation itself, with control over the devices via the proprietary MDM solution, Tutus Vakt. Through the MDM system, devices can be remotely wiped, configured, and managed with individual or group-based policies, tailored to the organisation's own needs and structures.

T220, built on the Samsung Galaxy XCover7 Pro, is designed for demanding environments. MIL-standard certified and IP68 rated, with a wide range of accessories that build capability.



Designed for different environments

Färist Mobile is also available in a configuration adapted for office environments, without compromising on the high security requirements.

Would you like to know more about Färist Mobile?

Contact us for a walkthrough of how the solution meets your organisation's security requirements. Tutus offers support on all our products, solutions and services.

**Färist Mobile is a valued and approved solution in several European countries for handling classified information. The smartphone is also available in a configuration approved for the Swedish security classification level restricted secret (BH). Samsung and Galaxy are trademarks of Samsung Electronics Co., Ltd.*
