

# Färist Mobile T200

Smartphone based on Android for secure mobile communication.

## Strong protection with approved encryption

The Färist Mobile has an always-on VPN-tunnel that connects to your corporate network, protecting all IP-communication. This means that any information transferred via apps running on Färist Mobile – be it voice, messaging, e-mail or data – is protected. Furthermore, strong disk encryption with external keys protects stored user data against leakage and theft.

- Compatible with all Android apps
- Can be used as a VPN modem when connected to a laptop
- Secure storage accessible via USB
- Centralized management with secure updates over the air
- Internet access through corporate firewall
- Key exchange using ephemeral Diffie-Hellman with forward secrecy
- Encryption using AES 256
- Approved for the protection of EU and NATO classified information on the level of Restricted
- Seamless roaming between 3G/4G and WiFi
- Local and remote wipe
- No requirement for mandatory vendor accounts
- Available with NATO SCIP standard for secure voice

## Protection against malware using approved apps

Only approved apps that are available on the permit list in the marketplace can be installed on the Färist Mobile. This prevents the installation of malware or other insecure apps.

## Ease of use

The Färist Mobile user interface is standard Android. All Android apps run on Färist Mobile and all security functionality is transparent for the end user.
