

CAdmin

The centralized administration tool, CAdmin, enables straightforward management of all Färist units, both locally and remotely.

Tutus is a comprehensive cybersecurity company specialized in information and network security, with a strong focus on encryption. Founded in 1992, we develop high-end solutions for mission-critical organisations that require reliable protection for classified information at the Restricted level.

CAdmin

The centralized administration tool, CAdmin, enables straightforward management of all Färist units, both locally and remotely.

CAdmin provides effective support when setting up networks with many encryption devices. The tool is easy to use for configuring and administering even the most complex network environments.

Rule-Based Tunnel Configuration

The rule-based configuration is a powerful feature that allows CAdmin to configure complex network topologies with minimal effort from the administrator. The administrator defines the connection rules for the network endpoints using wildcards, after which the tool automatically generates the configuration for the entire VPN network.

Graphical and Intuitive Interface for Easy and Secure Management

The CAdmin application features an intuitive and user-friendly graphical interface, designed to simplify the configuration, administration, and management of all Färist devices in your network.

Multiple Users and Roles

CAdmin supports multiple users with different roles—both administrators and operators. Administrators have full access to all functions, while operators have read-only access and the ability to restart network devices.

Crypto Device Groups

CAdmin can organize encryption devices into groups with a shared configuration, for example for administrators, trusted CAs, NTP servers, log servers, and similar functions.

Flexible network management

- Can Run on Both Linux and Windows
- Rule-based configuration of VPN topology
- Monitoring the status of Färist remote devices
- Track changes in the network configuration
- Create and Manage Complex Networks
- Supports networks with thousands of devices
- Administration completely separated from user traffic
- User authentication with smart cards
