# TUTUS

Färist Mobile
A secure Android-based smartphone designed to protect sensitive information in all situations.

Tutus is a comprehensive cybersecurity company specialized in information and network security, with a strong focus on encryption. Founded in 1992, we develop high-end solutions for mission-critical organisations that require reliable protection for classified information at the Restricted level.

Färist Mobile

A secure Android-based smartphone designed to protect sensitive information in all situations.

Approved for EU and NATO Restricted: The phone has received both EU and NATO approval for the Restricted security classification. This makes Färist Mobile a natural choice for organisations with high information security requirements.

Encryption and VPN: The phone protects all communication, calls, messages, documents, and apps – with strong encryption and a mandatory VPN tunnel. It can also be used as a portable VPN modem for other devices in the organisation, such as laptops.

Secure, durable, and user-friendly: Tutus secure smartphone provides comprehensive protection against data breaches, eavesdropping, and malware, without compromising usability or flexibility. It is robust and durable, suitable for everyday use as well as demanding environments.

Färist Mobile

- EU and NATO-approved for information up to the security classification Restricted.
- Two user modes – one of which is extra protected. Both modes are owned and controlled by the organization.
- Protected with certificate-based authentication and a secure boot process.
- Centralized management with the option for remote wipe.
- Robust and secure for use in office environments and in the field.

Technical information

- Mandatory VPN tunnel for all IP communications
- The organization has full control over which applications are permitted on the device
- Certificate-based authentication
- Secure boot process – protection against unauthorized software at startup
- Automatic distribution of security updates on a monthly basis
- Internet traffic is routed through the organization's firewall
- No tracking by third-party providers such as Google or Meta

T140
