# TUTUS

PD Client

An independent client designed for organizations with high security requirements, while remaining easy to manage.

Tutus is a comprehensive cybersecurity company specialized in information and network security, with a strong focus on encryption. Founded in 1992, we develop high-end solutions for mission-critical organisations that require reliable protection for classified information at the Restricted level.

PD Client

An independent client designed for organizations with high security requirements, while remaining easy to manage.

PD Client is optimised for handling sensitive information within, for example, public administration. Each user is assigned two personal components: a work memory and an operating system unit. The encrypted work memory is bound to the individual user and is used to store sensitive information. The operating system is hardened and can be delivered with the applications required by the organisation.

Protect your information in compliance with legislation. PD Client is a standalone computer with external physical units for the operating system and storage.

- **Multiple users** – As each user has their own operating system unit, several users can share the same diskless client. This makes the solution both cost-effective and environmentally friendly.

- **Software** – Compatible with well-known software such as office suites, CAD applications and more, while still meeting strict security requirements.

- **Accessories** – A wide range of compatible accessories is available for PD Client, fully compliant with EMSEC and TEMPEST requirements, including monitors, printers, CD burners, USB sanitisation devices, and more.
